1.Creating a Basic HTML Web Page

Use headings, paragraphs, line break, horizontal line, bold, italic, underline, superscript, and subscript tags.

Program:

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
    <title>Basic HTML Web Page</title>
```

```
</head>
```

```
<body bgcolor="lightblue">
```

```
    <center>
```

```
        <h1><font color="darkblue"> 🌐 Welcome to My HTML Web Page
```

```
🌐 </font></h1>
```

```
        <h2><font color="green">Learning Basic HTML Tags</font></h2>
```

```
        <h3><font color="purple">Simple & Beautiful Web Page</font></h3>
```

```
    </center>
```

```
    <hr color="red" size="4">
```

```
    <p>
```

HTML stands for **Hyper Text Markup Language**. It is the standard language

used to create *web pages*. HTML allows us to display

text, images, tables, forms, and multimedia on the Internet.

✨ Text Formatting Examples

Bold Text: HTML makes important text bold.

Italic Text: Used for emphasis.

Underlined Text: Highlights important words.

Water Formula: H_2O

Mathematical Formula: $(a + b)^2 = a^2 + 2ab + b^2$

About HTML

<p>

HTML is easy to learn and is the foundation of every website.

By combining <i>HTML</i>, CSS, and <u>JavaScript</u>,
we can create attractive and interactive websites.

</p>

<hr color="green" size="3">

<center>

<h2> 🎉 Thank You! 🎉 </h2>

<p>Created by: Your Name</p>

</center>

</body>

</html>

Output:
